

Online store to buy electronic devices

The main goal of this project to create a backend API for store where people can buy electronic devices, for example Sulpak, Technodom, Alser and other. Website will have some tabs: Main, About us, Categories, Search field, Login, Registration and etc. Authorization will be done to help users to make order with cart

What type of devices will be there? Our store is specialized on electronic devices like smartphones, laptops, computers, smartphone and computer gadgets, household appliances and etc.

Functionality:

- Authorization
- Product Searching
- Filtering products by category, price
- Product List
- Category List
- Cart
- Super user Product update/create/destroy
- Super user Category update/create/destroy
